## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on November 28, 2005 has been considered by the examiner.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imakado et al (US 7,151,788). Imakado et al teaches a laser processing apparatus for having: a beam expander (103) for enlarging a beam size of the laser light emitted from a laser light source (101); a condenser lens (112) for converging the laser light incident thereon by way of the beam expander (103) into the object (115); and a stop member (117) having a light-transmitting hole for narrowing and transmitting the laser light. Imakado et al does not specifically teach a lens holder holding the condenser lens and including a light-transmitting hole for making the laser light incident on the condenser lens. However, it would have been obvious to one of ordinary skill in the art to provide a lens holder for the condensing lens, since the lens is not held up in the air (as illustrated in Fig. 2) realistically without a support such as a lens holder. As such, the clear

aperture of the lens and the lens holder inherently provide for a first light-transmitting hole. Therefore, stop member having a second light-transmitting hole for narrowing and transmitting the laser light is disposed on an optical path of the laser light connecting the beam expander (103) and the first light-transmitting hole to each other and is separated from this lens holder. As shown in Fig. 2, the laser light emitted from the beam expander (103) is parallel light and the second light-transmitting hole (117) has a diameter not greater than that of the first light-transmitting hole of the condensing lens (112).

### ***Claim Objections***

Claim 4 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 3. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

### ***Allowable Subject Matter***

Claims 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest a laser processing apparatus having the recited structure of independent claim 1 as well as satisfying the recited numerical relationship.
